

Horseshoe pond:

12.5 lbs copper sulfate used to treat spirogyra filamentous algae.

.375 gal cidekick surfactant used to help bind copper sulfate onto filamentous algae.

64 oz blue pond dye.

Interstate pond: The interstate pond had an oxygen level of 5.9 ppm (7-9 ppm is optimal) which is too low for an algae treatment, I skipped a treatment this time to not hurt your fish.

64 oz blue pond dye.
